BUSINESS PROCESSES COMPARISON

Business Processes

This analysis is not intended to endorse any ILEC/RBOC provisioning process or to suggest that any such processes would comply with appropriate forward looking cost methodology. This analysis is NOT a cost study. The purpose of this analysis is to provide a high level comparison between the worksteps and time involved in performing the five activities described below AS CURRENTLY UNDERTAKEN BY THE RBOCS WITHOUT ADEQUATE AUTOMATION (in the case of UNE-L hot cut scenarios), based upon general information gleaned by QSI from numerous proceedings across the nation. The intention of the analysis is to allow the reader to understand why certain activities take longer, cost more or introduce additional worksteps when compared to one of the other five activities.

Processes are organized by departmental responsibilities in a typical ILEC/RBOC structure. This structure is typical but not intended to represent any individual ILEC/RBOC.

The activities are demonstrated in this example as occurring in individual departments, however depending on the organizational structure of an actual ILEC/RBOC these activities may occur in different departments/organizations but represent activities that generically are performed by ILEC/RBOCs in the provisioning of services. The organization structure of activity task is not intended to endorse or recommend any organizational structure.

SERVICE	TOTAL TIME (Min)	Labor Rate Per Hour	Labor Rate Per Min
UNE-L Hot Cut (coordinated)	59.26	\$56.00	\$0.93
UNE-L Hot Cut (non coordinated)	44.58	\$56.00	\$0.93

1. Year End 2003 UNE-P line data taken from FCC Report "RBOC_Local_Telephone_Dec_2003"

2. VZ only provides avg vol per manhole's wire (4E)

1. Year End 2003 UNE-P line data taken from FCC Report "RBOC_Local_Telephone_Dec_2003"
2. VZ only provides avg vol per manager's area (150/day in 2 offices per mgr's area) as a scalability projection - batch stated as critical mass - calculation estimate based on avg number of manager's areas in NY, RI, and Md. (average manager's areas from NY, RI, Md initial testimony in cases 02-C-1425, 3550&2681, and 8988 respectively, and number of Co's taken from FCC AMIS Report 43-07 dated Dec. 2003.)
3. State specific monthly hot cut data based upon avg. of hot cuts reported by Verizon in PAP reports filed with state commissions April-June 04, subcategory P-9-01. The Data are available to users who have access to WISE.
4. Information is suspect. Current hot cut rates provided by respective state Commission Staffs.
5. Proposed rates for NY, Mass., N.J., R.I., MD., Pa., D.C. taken from VZ testimony public exhibit III-F Case 02-C-1425, Supp-V docket No. D.T.E. 03-60, Exhibit III-E Docket No. T003090705.
6. VZ did not contest Impairment in Maine, Vermont, New Hampshire, and West Virginia- proposed rates not filed.
7. Virginia did not initiate TRO related impairment proceeding - waited for outcome of DC Circuit Court Ruling
8. Delaware did not initiate hot cut proceeding - waiting for ALJ ruling in NY
9. Hot Cut not tariff item- negotiated as part of interconnect agreements - per Commission Staff
10. IDLC Surcharge applies per line served via IDLC and is in addition to Field/Dispatch Charges that may apply.

Field Installation/Dispatch charges are based on tariffed rates, and will be charged for each requested or required dispatch.

1. Year End 2003 UNE-P line data taken from FCC Report "RBOC_Local_Telephone_Dec_2003"
2. State specific monthly migration data calculated based upon BellSouth's monthly estimate of 347,254 region-wide hot cuts and year end 2003 weighting. (See public version of A.H. Direct at page 8 in FPSC Docket No. 030851-TP)
3. Current and proposed hot cut pricing for AL, GA, and NC taken from public exhibit EX. JAR-4 in APSC Docket No. 29054, Ex. JAR-4 in GPSC Docket No. 17749-U, and Ex. JAR-4 in NCUC Docket No. P-100, Sub 133, respectively.
4. Current and proposed hot cut pricing for FL is taken from BS' public response to Staff's 1st set of Interrogatories, Item No.3 in FPSC Docket No. 030851-TP.
5. Where not specifically indicated otherwise, BellSouth's Rate is comprised of the loop NRC plus the manual order coordination rate - both taken from the Company's standard ICA. (http://www.interconnection.bellsouth.com/become_a_clec/html/ics_agreement.html).
6. Data taken from BellSouth's public Responses to AT&T's First Set of Interrogatories, Item No.4 in GAPSC Docket No. 17749-U.

data from Qwest website

<http://www.uswest.com/cgi-bin/iconn/dlc.cgi>

Methodology: IDLC loops / total loops

The above table shows the percentage of IDLC loops by Qwest state as, well as the highest percentage of IDLC loops exhibited by a wire center within those states. For instance, the state-wide IDLC concentration in Arizona is 10%, compared to a wire center within Arizona that exhibits a 68% IDLC concentration.

DEFINITIONS

TOTAL LOOPS

All loops/pairs installed in the network and assignable from OSP feeder terminals.
This includes assigned, working, defective and spare pairs.

LOOPS AVAILABLE

Loops/pairs that are not assigned, working or defective (i.e., spare pairs), but are available to carry traffic and are assignable from OSP feeder terminals.

LOOPS IN SERVICE

Loops/pairs that are active and carrying traffic (i.e., working pairs) from assignable OSP feeder terminals.

LOOPS W/ INTEGRATED DLC

All loops/pairs installed in the network that originate from an Integrated DLC system and are assignable from OSP feeder terminals.

This includes assigned, working, defective and spare Integrated DLC pair gain pairs.

LOOPS W/ UNIVERSAL DLC

All loops/pairs installed in the network that originate from a Universal DLC system and are assignable from OSP feeder terminals.

This includes assigned, working, defective and spare Universal DLC pair gain pairs.

Qwest data for Arizona shows that, state-wide, 17% of total loops are served by IDLC, with one wire center exhibiting an IDLC concentration of 68%. Out of the total 130 Qwest wire centers in Arizona, forty (40) wire centers have IDLC concentrations of 20% or higher (serving 1,389,631 loops). Twenty five (25) wire centers have IDLC concentrations between 21%-40%, twelve (12) wire centers have IDLC concentrations of between 41%-60%, and three (3) wire centers have IDLC concentrations of between 61%-80%. The diagram below depicts the wire-center specific IDLC data that is contained in the far left table, by CLLI code.

Totals	69	855,171

Qwest data for Idaho shows that, state-wide, 12% of total loops are served by IDLC, with one wire center exhibiting an IDLC concentration of 52%. Out of the total 69 Qwest wire centers in Idaho, three (3) wire centers have IDLC concentrations of 20% or higher (serving 77,821 loops). Two (2) wire centers have IDLC concentrations of between 21%-40% and one (1) wire center has an IDLC concentration of between 41%-60%. The diagram below depicts the wire-center specific IDLC data that is contained in the far left table, by CLLI code.

Percent IDLC in wire centers for Idaho
